Good morning Mr. Rob,

We are currently working on a couple of projects on Interstate 5 and State Route 33 near the City of Coalinga within Fresno County. Both projects will overlay the existing surface with a thin layer of Asphalt. We are trying to secure a recycle water source for construction. The project on interstate 5 will need approximately 326,000 gallons of water (1 Acre-foot) and the project on State Route 33 will need approximately 107,213 gallons of water (0.33 Acre-foot). Construction for both projects will begin in the summer of 2016. Please advise if the City of Clovis could provide the recycled water needed for construction of both projects.

Thank you!

Trinidad Anguiano
